MANAGE AGENTS, QUEUES, AND SKILLS WITH OMNI SUPERVISOR

Manage agents, queues, and skills in Omni Supervisor.

Available in: Salesforce Classic (not available in all orgs) and Lightning Experience

Available in: **Essentials, Pro Suite, Professional, Enterprise, Performance, Unlimited**, and **Developer** Editions

[Get to Know the Omni Supervisor Tabs](#)

Supervisors can check the health of their call center in real time using the Agents, Queues Backlog, Assigned Work, Skills Backlog, and Wallboard tabs in Omni Supervisor. These tabs let supervisors see which work items are open and active, who's assigned to what, and other details such as open capacities and average wait times for customers.

[Sort and Filter in Omni Supervisor](#)

Organize and focus your real-time data in Omni Supervisor to effortlessly find the information you need.

[Change Queues and Skills Assigned to Agents](#)

Change agents' queues and skills as needed on the Agent tab in Omni Supervisor. If the Change Queues and Change Skills buttons still aren't visible, check if those actions were added to the supervisor configuration.

[Support and Train Your Agents](#)

Support your agents in real time while they're working with customers. Agents can raise a flag that appears in Omni Supervisor when they need your help. If conversation intelligence detects a key word or phrase in conversation, supervisors see an alert.

[Transfer a Work Item to a Different Skill Set](#)

You can transfer a work item to a different skill set so that an agent with the right skills can resolve the issue. For example, if an agent doesn't have the right skills to resolve the case, the agent can transfer the case and specify the required skills.

SEE ALSO:

[Supervisor Monitoring for Voice](#)

Get to Know the Omni Supervisor Tabs

Supervisors can check the health of their call center in real time using the Agents, Queues Backlog, Assigned Work, Skills Backlog, and Wallboard tabs in Omni Supervisor. These tabs let supervisors see which work items are open and active, who's assigned to what, and other details such as open capacities and average wait times for customers.

Administrators can [configure which tabs are shown and in which order](#). They can also create [custom Omni Supervisor tabs](#) that have their own components or dashboards.

Depending on how your administrator set up your Omni Supervisor, you might not see all action button on Omni Supervisor tabs. Omni Supervisor tabs are shown based on the type of routing that is set up in your org.

- If only queue-based routing is set up, Omni Supervisor shows the Agents, Queues Backlog, and Assigned Work tabs. The Agents tab doesn't show the Skills column.

EDITIONS

Available in: Salesforce Classic ([not available in all orgs](#)), Lightning Experience

Omni Supervisor is available in: **Essentials, Professional, Enterprise, Performance, Unlimited**, and **Developer** Editions

- If both queue-based routing and skills-based routing are set up in the same org, Omni Supervisor shows all of the tabs.
- If external routing is set up, Omni Supervisor shows the Agents, Queues Backlog, and Assigned Work tabs. The Agents tab doesn't show the Skills column.

Table 1: Omni Supervisor Tabs

Tab	Only queue-based routing	Both queue-based routing and skills-based routing	External routing
Agents	✓	✓	✓
Assigned Work	✓	✓	✓
Queue Backlog	✓	✓	✓
Skills Backlog	✗	✓	✗
Wallboard	✓	✓	✓

Agents Tab

The Agents tab in Omni Supervisor is a simple way to keep up with your agents' presence statuses, channels, assigned queues, and open capacity. You can even see how long your agents have been logged in and when they last accepted new work.

Queues Backlog Tab

Gauge your backlog with the Omni Supervisor Queues Backlog tab. The Queues Backlog tab is shown if either queue-based routing or external routing for Omni-Channel is enabled in your org.

Assigned Work Tab

Take a stroll through the work items that are making their way through your queues and onto your agents' screens, using the Omni Supervisor Assigned Work tab.

Skills Backlog Tab

See pending work items for skills-based routing in the Omni Supervisor Skills Backlog tab. The Skills Backlog tab is shown only if you have skills-based routing enabled in your org.

Wallboard Tab

The Wallboard in Omni Supervisor provides you with a snapshot of how your agents are keeping up with their contact center workload. The Wallboard tab shows key metrics for the agents and work that you manage. The wallboard shows metrics for work items that are routed using queues or skills. If applicable, the metrics are based on the agents, queues, and skills selected in the associated supervisor configuration.

Agents Tab

The Agents tab in Omni Supervisor is a simple way to keep up with your agents’ presence statuses, channels, assigned queues, and open capacity. You can even see how long your agents have been logged in and when they last accepted new work.

There are two views in the Agents tab: All Agents and Agents by Queue.

All Agents Subtab

All Agents lets you see the big picture of your agents’ availability, capabilities, capacity, and workload. It’s the default for the Agents tab because it provides the best overall picture of how your agents are doing. Agents logged into Omni-Channel appear in rows, where you can see their status, channels, queues, workload, and capacity.

EDITIONS

Available in: Salesforce Classic (not available in all orgs), Lightning Experience

Omni Supervisor is available in: **Essentials, Professional, Enterprise, Performance, Unlimited, and Developer Editions**

Here, you can also change an agent’s status using the Action column as long as they’re not offline. If you select Offline, keep in mind that the agent’s work isn’t tracked anymore.

To see more nuanced information about how an agent is doing, select the agent. You can view the Agent Detail and, unless disabled, Agent Timeline views.

The Agent Detail view provides details about an agent’s activity and timestamps.

Agents by Queue Subtab

The Agents by Queue subtab provides information about how well your queues are covered. Every queue that has at least one agent that’s Online or Away is shown. You can see how many agents are assigned to the queue and how many of them are online, away, or idle. This graph lets you see if you must rearrange agents to make sure your incoming work is covered.

Agents Tab Fields

Fields for the Omni Supervisor Agents tab.

How After Conversation Work Affects Agent Capacity

When a voice call is active, it consumes 100% of an agent's capacity. If ACW is enabled, an agent's capacity is freed up after a call's ACW period ends or the agent closes the tab, whichever happens first. When a call's ACW period ends, the call is removed from the agent's My Work tab and no longer appears in Omni Supervisor.

SEE ALSO:

[Show All Offline Agents in Omni Supervisor](#)

Agents Tab Fields

Fields for the Omni Supervisor Agents tab.

All Agents Fields

The All Agents view in the Agents tab contains fields with information that lets you know how your agents are doing.

Column	Description
Agent	The first and last name of the agent.
Status	The agent's current presence status, as set in the Omni-Channel component.
Flag	Indicates whether an agent or conversation intelligence raised a flag.
Action	Allows you to change an agent's status.

EDITIONS

Available in: Salesforce Classic ([not available in all orgs](#)), Lightning Experience

Omni Supervisor is available in: **Essentials**, **Professional**, **Enterprise**, **Performance**, **Unlimited**, and **Developer** Editions

Column	Description
Work Summary	All Omni-Channel work currently assigned or open with the agent. You can get an overview of the work items with popup details. - Assigned work items are in the agent's component and waiting for acknowledgment. - Open work items have been accepted and the work is in the agent's inbox.
State	Amount of time the agent has been in the current presence status.
Login	Amount of time the agent has been logged into an online or busy Omni-Channel status. This field reflects the duration of the agent's entire Omni-Channel session, which ends when the agent goes offline in Omni-Channel or closes their browser.
Accept	Amount of time since the agent last accepted a work item, either explicitly or through auto-accept.
Primary Capacity	The percentage of the agent's total capacity for uninterruptible work that's being used. 0–49% capacity is shown with a green icon 50–79% capacity is shown with a yellow icon 80–100% capacity is shown with a red icon When agent capacity reaches 99.1%, the agent is shown as 100%. Small work of less than 1% can be routed to the agent.
Interruptible Capacity	The percentage of the agent's total capacity for interruptible work that's being used. 0–49% capacity is shown with a green icon 50–79% capacity is shown with a yellow icon 80–100% capacity is shown with a red icon When agent capacity reaches 99.1%, the agent is shown as 100%. Small work of less than 1% can be routed to the agent.
ACW	Amount of time the agent spent on closing tasks after a conversation. Short for After Conversation Work.
Workload	The total size of all assigned and open work with the agent compared to the agent's overall capacity as set through the Presence Configuration. Work is sized through the Routing Configuration associated with the Omni-Channel-enabled queue that's used to route the work to the agent.
Channels	The agent's associated Service Channels (for agents in an online status), so you know what types of work the available agent can handle.

Column	Description
Assigned Queues	Omni-Channel-enabled Salesforce queues that the agent can receive work through in Omni-Channel. The Assigned Queues column is shown only in orgs that use Omni-Channel queues-based routing.
Skills	Skills that are assigned to the agent. The Skills column is shown only in orgs that use Omni-Channel skills-based routing.

Agent Detail Fields

The All Agents view in the Agents tab contains fields that provide information about the particular agent's current work.

Column	Description
Type	Salesforce object type for the work, such as Lead, Case, or SOS.
Details	Information from the object's primary compact layout that provides more context about the work item.
Queue	The Omni-Channel-enabled queue used to assign and route the work to the agent.
Skills	The list of skills applied to the work item.
INTR	A Boolean showing whether the work is interruptible or not. A checkmark indicates interruptible work.
Work Size	The size of the Omni-Channel work item based on the routing configuration associated with the queue.
Status	Omni-Channel work status. It includes: - Assigned work items in the agent's Omni-Channel component waiting for acknowledgment. - Open work items that are assigned to an agent and are in the agent's inbox.
Requested Time	Date and time when the item was assigned to the Omni-Channel-enabled queue, which triggers the routing.
Assigned Time	Date and time when Omni-Channel pushed and assigned the item into the agent's Omni-Channel component.
Accepted Time	Date and time that the item was accepted, either by the agent or by auto-accept. Accepted items are opened in the agent's inbox.
Handle Time	How long the item has been open with the agent. It's calculated using the difference between "now" and when the agent accepted the work.

Column	Description
Speed to Answer	How quickly the agent responds to work requests. It's calculated using the difference between when the work was requested and when the agent accepted it.

Agents by Queue Fields

The Agents by Queue view in the Agents tab contains fields with information about the work agents are doing in your Omni-Channel queues.

Column	Description
Queue	The name of the Omni-Channel queue used to assign and route the work to the agent. Only queues containing at least one agent in an Online or Away state are displayed.
Total	Total number of agents in the queue.
# Online	Number of agents with an Online status.
% Online	Percentage of agents in the queue who have an online status.
# Away	Number of agents with an Away status.
# At Capacity	Number of agents who are at capacity.
% At Capacity	Percentage of Agents in the queue who are at capacity.
# Idle	Number of agents who are idle. Idle agents have no current work, with 0% capacity consumed.
% Idle	Percentage of agents in the queue who are idle.
Average Capacity	Average capacity among the online and away agents in the queue.

How After Conversation Work Affects Agent Capacity

When a voice call is active, it consumes 100% of an agent's capacity. If ACW is enabled, an agent's capacity is freed up after a call's ACW period ends or the agent closes the tab, whichever happens first. When a call's ACW period ends, the call is removed from the agent's My Work tab and no longer appears in Omni Supervisor.

Omni-Channel is available in: Salesforce Classic and Lightning Experience

Service Cloud Voice is available in: Lightning Experience

Omni-Channel is available in: **Professional, Enterprise, Performance, Unlimited**, and **Developer** Editions

Service Cloud Voice is available in: **Enterprise, Performance**, and **Unlimited** Editions

When an agent updates their status in Omni-Channel during an ACW period, the ACW period ends and the agent work record is closed. If an agent logs out of Salesforce during an ACW period without marking it done, the ACW period continues for a little over a minute.

Queues Backlog Tab

Gauge your backlog with the Omni Supervisor Queues Backlog tab. The Queues Backlog tab is shown if either queue-based routing or external routing for Omni-Channel is enabled in your org.

Spend some time catching up on the activity in your Omni-Channel queues using the Queues Summary view in the Queues Backlog tab. You can see your queues' priority, configured work size, type, and wait times. This information can give you an idea of how efficiently work moves through the queue and to your agents. Use these insights to determine which queues are doing well and which could use a few more agents.

Clear Filters

☐	QUEUE	PRIORITY	WORK SIZE	TYPE	TOTAL WAITING	LONGEST WAIT TIME	AVERAGE WAIT TIME
☐	Case Lead Queue	1	1 unit		1	11 min 55 s	11 min 55 s
☐	Case Queue	1	1 unit		5	12 min 37 s	12 min 37 s
☐	Hybrid Queue	1	1 unit		2	12 min 24 s	11 min 45 s
☐	Order Queue	1	1 unit		0	--	--
☐	SOS Queue	1	1 unit		0	--	--

To change the agents assigned to queues, select the queues, and then click **Assign Agents**. When you add an agent to a new queue, they remain assigned to their previous queues as well. For telephony providers that don't support adding agents directly to a queue, you assign groups of agents to a queue instead of individual agents.

The Queue Details view drills into specific queues so you can see their configurations, available agents, wait times, and work items. If you see lots of agents and not much work, you know it's time to move agents to another queue. But if you see only a few agents and long wait times... it's time to call for backup.

Skills are assigned to work items by the PendingServiceRouting. If there aren't any agents available who possess the required skills, then the work item is placed in the backlog. You can see whether you need more agents with certain skills by looking at the skills assigned to the work items in the Skills Backlog.

To drill down and see work items that require a specific set of skills, go to the Skills Backlog Summary and select one or more skills in the Skills column. The Skill view shows all pending work items that require any or all of the selected skills. You can see the skills needed and the skill level needed, in addition to the priority, work size, and waiting time for each work item.

Skills Fields

The Skills view in the Skills Backlog tab shows you all of the pending work items that require the same skill.

Column	Description
Level	The skill level required for this work item.
Type	The type of work item, such as case or lead.
Details	Information from the object's primary compact layout that provides more context about the work item.
Skills	The skills assigned to this work item by the PendingServiceRouting. The skill level is shown in the parentheses after the skill. For example, Java (2) indicates that you need an agent who's familiar with Java but not an expert.
Priority	The priority of the work item.
Work Size	The size of the Omni-Channel work item based on the associated routing configuration.
Wait Time	The amount of time that the work item has been pending.
Requested Time	Date and time when the item was placed in the Omni-Channel-enabled backlog.

Wallboard Tab

The Wallboard in Omni Supervisor provides you with a snapshot of how your agents are keeping up with their contact center workload. The Wallboard tab shows key metrics for the agents and work that you manage. The wallboard shows metrics for work items that are routed using queues or skills. If applicable, the metrics are based on the agents, queues, and skills selected in the associated supervisor configuration.

To focus the Wallboard results, select the queues or skills that you're interested in. The Wallboard uses 'AND' logic for those queues and skills when filtering, so it includes only work or agents for the selected queues or skills. For each metric, the wallboard shows the queues or skills that are used in filtering.

You can select multiple queues or skills to filter by. The Wallboard uses 'AND' logic for those queues and skills when filtering, so it includes only work or agents for the selected queues or skills. For each metric, the wallboard shows the queues or skills that are used in filtering.

You can choose the type of display for each chart: metric, donut, horizontal bar, or vertical bar chart.

Wallboard Tab Fields

Fields for the Omni Supervisor Wallboard tab.

Wallboard Tab Fields

Fields for the Omni Supervisor Wallboard tab.

Column	Entry
Agent Capacity	- Available Capacity: The capacity that remains for new work items for agents that the supervisor oversees. - Used Capacity: The capacity that's currently in use for agents that the supervisor oversees.
Agent Capacity Status	Shows the current count of agents with each status. - At Capacity: Agents are online but are at full capacity so they aren't assigned more work. - Available: Agents are online, available, and with spare capacity to accept new work items. - Busy: Agents are logged into Omni-Channel but have Busy status, so aren't assigned any new work - Idle: Agents are available but don't have any active work items.
Agent Presence Statuses	The count of agents with the indicated presence status. The metric chart shows the 3 most common presence statuses and a total for other presence statuses.

EDITIONS

Available in: Salesforce Classic (not available in all orgs), Lightning Experience

Omni Supervisor is available in: **Essentials, Professional, Enterprise, Performance, Unlimited, and Developer** Editions

Column	Entry
	The vertical and horizontal charts show the top 5 most common presence statuses and a total for other presence statuses.
Agent Work Status	Shows the amount of work that entered each status over the last hour. - Assigned: How many work items were assigned to agents. - Canceled: How many work items were canceled; for example, the customer ends a chat before the agent accepts the work item. - Closed: How many work items were completed and closed. - Declined: How many work items that agents declined. - Opened: How many work items that agents opened to perform some work. - Push Timeout: How many work items were declined because of a push timeout. If set, a push timeout reassigns work when it's not accepted in the specified time. - Unavailable: How many assigned work items for which agents became unavailable; for example, the agent logged out before the work item was accepted or declined.
Raised Flags	Shows the number of flags raised by all agents. A flag indicates a work item that an agent needs help with.
Wait Time	Shows current wait times of all the work in the backlog. - Average Wait Time: The average time that work in the backlog has been waiting for an agent to become available. - Longest Wait Time: The longest time that work in the backlog has been waiting for an agent to become available.
Work Item Status	Shows the current count of work items with each status. The Waiting metric is one of the most important and useful metrics on the Wallboard. - Assigned: How many work items are assigned to agents but waiting to be accepted. - In Progress: How many work items agents have that are open. - Waiting: How many work items are waiting in the backlog to be assigned to agents.
Work Performance	Shows performance metrics for agents over the last hour. - After Conversation Time: The average time agents spend on wrap-up work after a call or messaging session. - Average Active Work Time: The average time that work items were open and in focus on agents' consoles.

Column	Entry
	- Average Speed to Answer: The average time from when the work item was requested until an agent accepted it. - Average Work Handle Time: The average time that agents spent on work items that are now completed.

Sort and Filter in Omni Supervisor

Organize and focus your real-time data in Omni Supervisor to effortlessly find the information you need.

Now that we've seen what Omni Supervisor has to offer, we'll show you how to optimize all this great data so you can quickly find what you're looking for. Filter the tables to display particular agents, queues, work types, capacity percentages, etc. and group that information with sorting.

Use filtering to pare down what's on your screen and get what you need faster. For example, if you want to see information about one particular team of agents, go to the All Agents view and select just those agents in the filter. You can apply multiple filters to the same grid, too. Hop seamlessly from an agent's open Leads to the Tier One Queue's open Cases with a Wait Time over 5 minutes.

Use sorting to organize columns as ascending or descending. For example, if you want to see which online agents most recently accepted work, filter the All Agents view to show only agents with an Online status, and sort the Time Since Last Accept column in ascending order.

The online agents who most recently accepted work are at the top of the screen. The possibilities are as endless as your curiosity.

Change Queues and Skills Assigned to Agents

Change agents' queues and skills as needed on the Agent tab in Omni Supervisor. If the Change Queues and Change Skills buttons still aren't visible, check if those actions were added to the supervisor configuration.

1. Open the Agents tab in Omni Supervisor.
2. To change the queues to which agents are assigned, select the agents, and then click **Change Queues**.

The Change Queues window shows the agents and queues to which they're assigned. Queues are shown based on the queues that you have access to in your supervisor configuration. If you don't have a supervisor configuration, then all queues are shown. Voice queues aren't listed in the Change Queues window.

 **Tip:** To assign a Voice queue to an agent, use the Queues Backlog tab in Omni Supervisor.

3. To change the skills assigned to agents, select the agents, and then click **Change Skills**.

Support and Train Your Agents

Support your agents in real time while they're working with customers. Agents can raise a flag that appears in Omni Supervisor when they need your help. If conversation intelligence detects a key word or phrase in conversation, supervisors see an alert.

When an agent raises a flag to signal that they need help, you can hold a private 2-way conversation with them in Omni Supervisor. Conversations for the Chat standard channel are 1-way only: agents can send whisper messages to the supervisor, but the supervisor can't reply.

1. In Omni Supervisor, look in the Flag column of the All Agents tab.
A raised flag appears when agents seek your help. Or you see an alert if conversation intelligence rules detect a certain word or phrase.
2. Click the raised flag to preview the agent's message to you. Optionally, you can lower the flag.
3. To see the full message, click **Monitor** to open the monitoring window (1) and send whisper messages to the agent.

EDITIONS

Available in: Lightning Experience

Omni Supervisor is available in: **Essentials, Professional, Enterprise, Performance, Unlimited, and Developer** Editions

The screenshot displays the Omni Supervisor interface. At the top, there's a navigation bar with 'scv console' and 'Omni Supervisor'. Below this, a table lists agents. The first agent, Dinesh Rohra, is highlighted. A 'Monitor' button is visible next to his name. To the right, a monitoring window (labeled '1') is open, showing a conversation transcript. The transcript includes a message from the agent: 'Supervisor, can you help me figure out t...'. Below the transcript, there's a 'Lower Flag' button. The interface also shows various metrics like 'Workload', 'Channels', and 'Assigned Queues'.

AGENT	STATUS	FLAG	ACTION	WORK SUMMARY	STATE	LOGIN	ACCEPT	CAPACITY	ACW	WORKLOAD	CHANNELS	ASSIGNED QUEUES
Dinesh Rohra	Available		Change Status	1 Voice Call	1 min 29 s	1 min 29 s	1 min 13 s	100%		5 / 5		

4. When the agent no longer needs help, you or the agent can lower the flag.

If you close the monitoring window, you can reopen it to continue the conversation. The conversation doesn't end until the call, messaging, or chat session ends. The agent-supervisor conversation is added in real time to the conversation transcript.

Transfer a Work Item to a Different Skill Set

You can transfer a work item to a different skill set so that an agent with the right skills can resolve the issue. For example, if an agent doesn't have the right skills to resolve the case, the agent can transfer the case and specify the required skills.

Available in: Lightning Experience

Available in: **Professional, Enterprise, Performance, Unlimited**, and **Developer** Editions with the Service Cloud

USER PERMISSIONS

To transfer work items to a different skill:

- Skills-based routing must be enabled and set up in your org

When an agent opens the transfer dialog and searches for skills, the search process looks for matching skills. The search results show matching skills from only the first 2,000 skills that were created.

Work items are transferred to an agent who has the required skills. When a work item is transferred, the status changes to Transferred. If no agent with the required skills is available, the work item isn't assigned and is shown in the [Skills Backlog Tab](#) in Omni Supervisor. When an agent with the required skills becomes available, Omni-Channel routes the work to that agent. For chat, if no agents have the skills or agents with the required skills are busy or at capacity, then the request is canceled.

 **Note:** Agents using Salesforce Classic can accept work items that are transferred to skills, but they can't transfer work items to skills.

The transfer icon doesn't appear in Enhanced Omni-Channel. You can create a similar result by adding an action on the appropriate record page, an action that executes a screen flow to route skills to appropriate targets.

1. Click the transfer icon.

The transfer dialog is displayed. The transfer dialog shows the skills that are already attached to the work item.

2. Search for the skill that the work item needs.

3. To add the skill to the work item, select the skill.

You can add several skills to the work item. For example, you could select billing and Spanish for a case that needs a Spanish-speaking agent who's knowledgeable about your company's billing practices. First, search for the "billing" skill and add it. Next, search for "Spanish" and add it, and so on.

4. Click **Transfer**.

 **Note:** For skills-based routed chats, the **Transfer** icon is on the work item on the My Work tab in the Omni-Channel component.

PROVIDE CUSTOMER SUPPORT FOR REAL-TIME CHANNELS WITH OMNI-CHANNEL

Service customers using their preferred means of real-time communication, including phone, messaging, or chat in standard and enhanced channels. You can accept and manage these types of support requests in Omni-Channel. If needed, while helping a customer, you can reach out to your supervisor to get support.

Available in: Salesforce Classic (not available in all orgs) and Lightning Experience

Available in: **Essentials, Pro Suite, Professional, Enterprise, Performance, Unlimited**, and **Developer** Editions

[Use the Omni-Channel Component to Work with Customers](#)

To begin receiving inbound requests from customers or to make outbound contacts, log in to the Omni-Channel component and update your status to indicate that you're available. If you don't see the Omni-Channel component in your app, check with your admin.

[Get Help from a Supervisor](#)

While servicing a customer on the phone or in a messaging or chat session, you can have a private conversation with your supervisor to get help and escalate issues. Raise a flag to get their attention, and then have a 2-way messaging conversation with them, or request that they join the conversation with the customer.

[Manage Your Omni-Channel Work While On the Go](#)

With Omni Inbox in Salesforce Mobile, work from anywhere using your mobile device.

SEE ALSO:

[Help Customers on the Phone](#)

Use the Omni-Channel Component to Work with Customers

To begin receiving inbound requests from customers or to make outbound contacts, log in to the Omni-Channel component and update your status to indicate that you're available. If you don't see the Omni-Channel component in your app, check with your admin.

When you mark your status as available in Omni-Channel, you begin receiving work requests, like phone calls. Work items assigned to you appear in Omni-Channel until you complete, transfer, or decline them.

Note: If your Omni-Channel widget loses its connection, it tries to reestablish the connection for two minutes. If it fails, you are disconnected. To reconnect, update your status.

By default, phone calls are taken through the same speakers and microphone your system device uses. To take calls through different audio devices, click the Settings icon on the Omni-Channel component and choose your preferred devices under Input and Output. The devices you choose are set only for your current browser. For example, if you choose a device for Google Chrome, that device isn't set for Mozilla Firefox. This feature isn't available in the Apple Safari browser.

If you set up a service channel to use the tab-based capacity model, Omni-Channel determines agent capacity based on the open tabs. Each tab is a session for a specific work item. To close the work item and remove it from your Omni-Channel instance, close the tab for that item. The tab-based capacity model releases an agent's capacity when a work tab is closed. If your work item is reassigned to a queue and another agent picks it up, the work item still shows in your Omni-Channel instance until you close the tab. Tab-based capacity models don't work with apps that use standard navigation.

If you set up a service channel to use the status-based capacity model, Omni-Channel determines agent capacity based on the status of accepted work, rather than the open tabs and sessions. Work remains assigned even if the agent closes the tab. If an agent is unavailable, their work still appears in the Omni-Channel component. Their work remains assigned and reflected in their capacity until the work is completed or reassigned to a different agent.

When you set up your app, you can choose whether the Omni-Channel component appears as a sidebar or in the utility bar at the bottom of your screen. These images show an open Omni-Channel component in the sidebar layout. The sidebar layout is recommended, as it provides more screen real estate and is the primary location for future Omni-Channel component features. Regardless of which layout you choose, the Omni-Channel component organizes work items with new work items at the top, in-progress items in the middle, and paused items at the bottom.

This image shows the Service Console with the Omni-Channel component opened in the sidebar.

This image shows the same Service Console with the Omni-Channel sidebar view collapsed.

This image shows new work (1), selected work that's paused (2), and work with an update notification (3) in an opened sidebar Omni-Channel component. The sidebar and utility-bar versions of the Omni-Channel component have equivalent functionality.

When Enhanced Omni-Channel is enabled:

- The Omni-Channel component uses an inbox format instead of New and My Work tabs, and is a single consolidated list.
 - The currently open work item is highlighted.
 - An icon indicates work that was paused.
 - A blue dot appears in the item's box to flag work that was updated.
1. To open the Omni-Channel component:
 - a. For the sidebar layout, click the Omni-Channel sidebar component  icon on the left-hand side of the screen.
 - b. For the utility-bar version, click **Omni-Channel** in the footer of your screen.
 2. Click the dropdown menu and select your status. If you're online, a green dot is shown next to the status. Now you're ready to work with customers.
 3. To accept an incoming work item, click the checkmark button in the Omni-Channel component.

When you accept a work item, the Omni-Channel component shows a timer. The timer shows the duration since the work item was first added to a queue.

When you have an incoming work item, the Omni-Channel component lets you know with an audible signal. You can also set up a visual notification so that you don't miss an important work item when you're away from its browser window. Turn on settings in the operating system and browser applications so that you can receive notifications. Then in the Omni-Channel component, click the Settings icon and turn on **Show new work notifications in the browser**. When a new work item is assigned and the browser window isn't in focus, you receive an alert. To view the browser window and accept or decline the work item, click the alert.

 **Tip:** To avoid missing work items routed to you, choose and test a preferred device for receiving notification sounds from Omni-Channel. Click the Settings icon on the Omni-Channel component and choose the device under Ringer Output. The device you choose is only set for your current browser. For example, if you choose a device for Google Chrome, that device isn't set for Mozilla Firefox. This feature isn't available in Apple's Safari browser. To check for the expected sound, click **Test Notification Sound**.

[Understand Capacity Models](#)

Get Help from a Supervisor

While servicing a customer on the phone or in a messaging or chat session, you can have a private conversation with your supervisor to get help and escalate issues. Raise a flag to get their attention, and then have a 2-way messaging conversation with them, or request that they join the conversation with the customer.

Available in: Lightning Experience

Omni-Channel is available in: **Professional, Essentials, Enterprise, Performance, Unlimited**, and **Developer** Editions

 **Note:** This feature is available for the Phone and Messaging for In-App and Web enhanced channels and the Chat standard channel. To use this feature for a chat session, your administrator must first enable it in the chat agent configuration settings. This feature is automatically available for other channels.

1. To raise a flag in Call Controls for calls, the Conversation component for messages, or the interaction pane for chats, click the Flag button () , enter a message, and click **Raise**.

 **Note:** If Omni-Channel Fallback Mode is enabled, the Flag button doesn't appear because it's not supported in that mode.

Your supervisor is alerted in Omni Supervisor, and your flag is added to the Raised Flags widget in their supervisor wallboard.

2. If you no longer need help, you or the supervisor can lower the flag.

The agent-supervisor conversation is added in real time to the conversation transcript.

Manage Your Omni-Channel Work While On the Go

With Omni Inbox in Salesforce Mobile, work from anywhere using your mobile device.

[Set Up Omni-Channel on Your Mobile Device](#)

To use Omni Inbox in the Salesforce Mobile app, you must have the Digital Engagement license. To set up Omni Inbox, complete these tasks.

[Manage Work with Omni Inbox](#)

To accept new work and resume previously assigned work, open Omni Inbox in the Salesforce Mobile app.

Set Up Omni-Channel on Your Mobile Device

To use Omni Inbox in the Salesforce Mobile app, you must have the Digital Engagement license. To set up Omni Inbox, complete these tasks.

1. Verify that your mobile device meets the minimum requirements for the Salesforce Mobile app.
2. Verify that you are assigned the Messaging Agent user permission.
3. Download and install the Salesforce Mobile app on your device. You can download it from the App Store or Google Play.
4. Verify that your device receives notifications from Salesforce Mobile. Your device can receive notifications about new work, updates to work, and changes to your presence status.

Manage Work with Omni Inbox

To accept new work and resume previously assigned work, open Omni Inbox in the Salesforce Mobile app.

1. Log in to the Salesforce Mobile app with your Salesforce credentials.
2. To view Omni Inbox, click **Menu > All Items > Omni Inbox**. If the admin added Omni Inbox as a top item in the app's navigation, you can also click **Omni Inbox** at the bottom of this page.
3. To view work items, change your presence status to indicate that you're available.

Note: Only presence statuses where all associated channels are configured for status-based capacity appear in the dropdown.

USER PERMISSIONS

To access Omni Inbox in the Salesforce Mobile app:

- Messaging Agent

4. To resume previously assigned or paused work, tap the work item in your inbox.

5. To accept new work, tap the checkmark (☐) next to the work item.
6. To decline work, tap the X next to the work item.
The X appears only if agents are allowed to decline a work item, which the admin sets in the presence configuration settings.
